

### 1 Surface power supplies and replacement information

We strongly recommend that you use only a genuine Microsoft power supply (also referred to as battery charger) that either came with your Surface device or was purchased separately to charge the battery. If your power supply is not working and you require a replacement, please refer to the table below for the corresponding Microsoft part number. You can purchase Microsoft-licensed power supplies from the Microsoft Store.

**NEVER replace with counterfeit or cheaper imitations as they will damage your Surface device, battery and charging system.**

### 2

The below table shows the Surface Model, Microsoft Power Supply Model # and watts used by different Surface devices.

Surface Model	Power Supply Model #	Total Wattage
Surface Pro 3	1625	36 watts
Surface Pro4	1625	36 watts
Surface Pro 5	1800	44 watts
Surface Pro 6	1800	44 watts
Surface Pro 7	1706	65 watts
Surface Book 2	1800	44 watts
Surface Book 3	1800	44 watts
Surface Laptop	1800	44 watts

### **IMPORTANT**

**Damage caused by use with products not manufactured, licensed, or supplied by Microsoft is not covered under the hardware warranty and may void existing warranty.**
